## INTRODUCTION

The sub-district of Kaliganj, within the district of Satkhira, is often faced with cyclones, storm surges and other climatic stressors. Cyclone Aila in 2009, for example, caused extensive displacement in the region due to the storm surge and long-term flooding that accompanied it with over 175,000 homes being destroyed<sup>1</sup> leading to displacement of people in the area. 14 years on from Aila, further cases of internal displacement due to various hazard events have taken place, such as Amphan in 2020. There is limited information available on people who have been displaced due disaster in this area and their key needs and vulnerabilities.

This assessment was undertaken by IOM under the overall leadership of the Displacement Management Cluster (DMC)<sup>2</sup>, with the support of USAID's Bureau of Humanitarian Assistance (BHA) to identify the locations, needs, and challenges of households which were displaced due to various disasters.

## SUMMARY OF KEY FINDINGS

1. Disaster displaced households at Kaliganj can be **categorized into two groups** – those who currently have ownership of their homes or land where they reside and those without – however **both require support** to achieve durable solutions.  
  
The key needs ranked by displaced people who are currently living in emergency or temporary housing were **sanitation, shelter and water**. For those living in owned or rented housing, the key needs were **water, sanitation and food**.
2. **Improved shelters and sanitation** were the top needs for those living in emergency and temporary shelters.
3. Majority of the displaced population feel **unsafe** while **using toilets** and **bathing spaces**.
4. **Seventy-four per cent** households living in owned and rented shelters and **sixty-nine per cent households** residing in emergency and temporary shelters responded that there has been a **major negative change in livelihood** opportunities following displacement, primarily due to loss of productive assets.
5. **Sixty-nine per cent** of the displaced families responded that they are in **need of capacity building** in order to improve their livelihood conditions.
6. **Eighty-five per cent** of the displaced families mentioned that they **did not receive support** following displacement, which includes cash or in-kind support to help manage the effects of displacement.

## METHODOLOGY AND DATA COLLECTION

The methodology was developed based on IOM's Displacement Tracking Matrix (DTM) methodology and was customized according to the context in Bangladesh. The study design included a primary snapshot of the number of total displaced households and their locations collected from key informant interviews (KIIs) at the union and village levels followed by an in-depth household survey conducted with a representative sample. Structured questionnaires were developed and piloted at the Union, Village and Household levels to include different perspectives and ensure that a holistic representation of long-term displacement could be deduced. Primary data collection took place between June-August 2023.

Experienced enumerators were selected and trained on the tools and data collection methodology. Enumerators commenced with the union level key informant interviews, targeting elected local government representatives such as Union Parishad Chairpersons or members of the Union Parishad where possible. The union level representatives were asked about the existence and location of people who were displaced due to disasters in their particular union.

Following the union level KIIs, all villages in the upazila were visited and village level KIIs were conducted with community representatives in order to substantiate the information received from the Union Parishad. Following this, a household level survey was conducted with a representative number of disaster displaced households in every village where people who were displaced due to disaster currently live.

During the course of the study, it became evident that displaced people identified by the Union officials and Village representatives during the KIIs can be divided roughly into two categories:

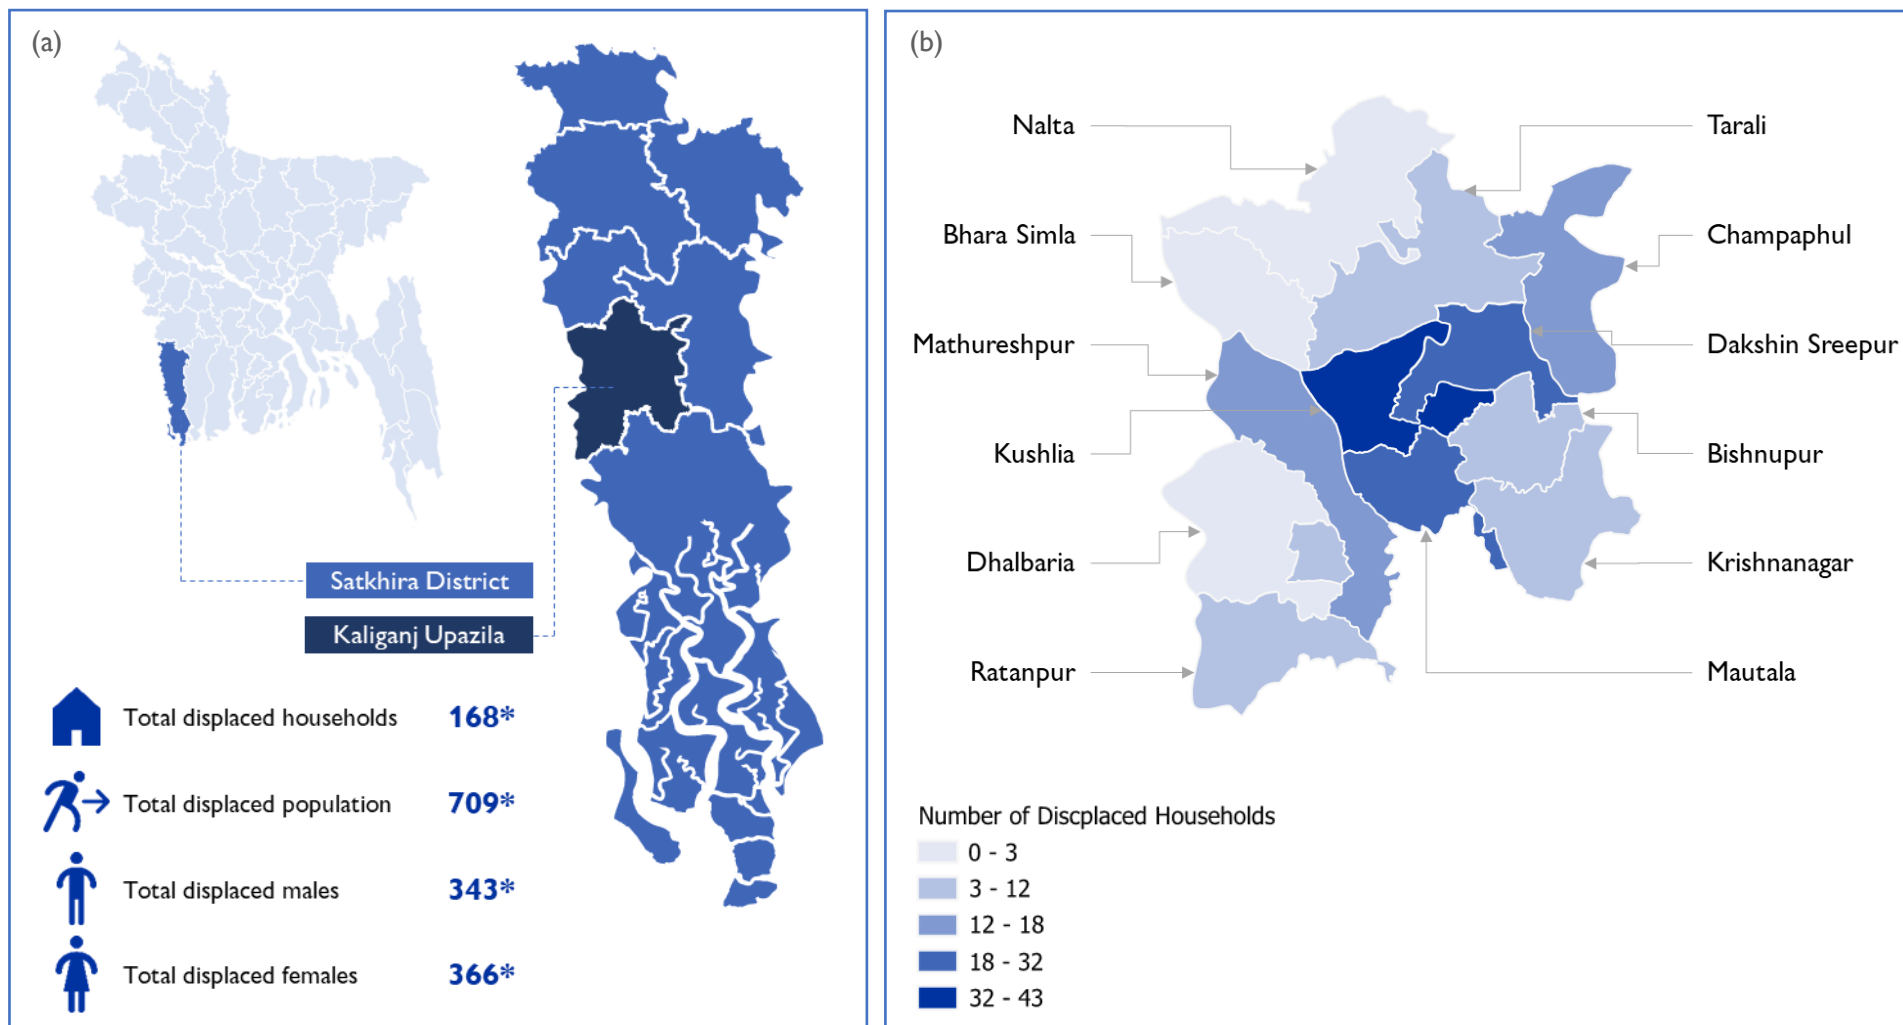

- 1) People who live in Owned and Rented Housing- People who own the land/house they are currently living on or are living in rented accommodations (and are able to pay rent)
- 2) People who live in Emergency and Temporary Housing- People who are in temporary housing (currently living in makeshift housing on government owned or private land of which they do not have legal ownership of, or in informal settlements or living with relatives, friends or family).

The study included questions regarding the displaced population's causes of displacement, their needs and challenges related to livelihood, WASH, protection and security. Access to services and support and their intentions to return were also explored.

## ASSESSED LOCATIONS – DISASTER DISPLACEMENT MAP AND OVERVIEW

Maps of a) Satkhira showing location of Kaliganj, b) Kaliganj showing geographic distribution of households displaced due to disaster.

\*The figures are an estimate based on the KIIs conducted at the Union level and Village level. A minimum of two KIIs were conducted at the village level and the higher number considered.

## SURVEY FINDINGS

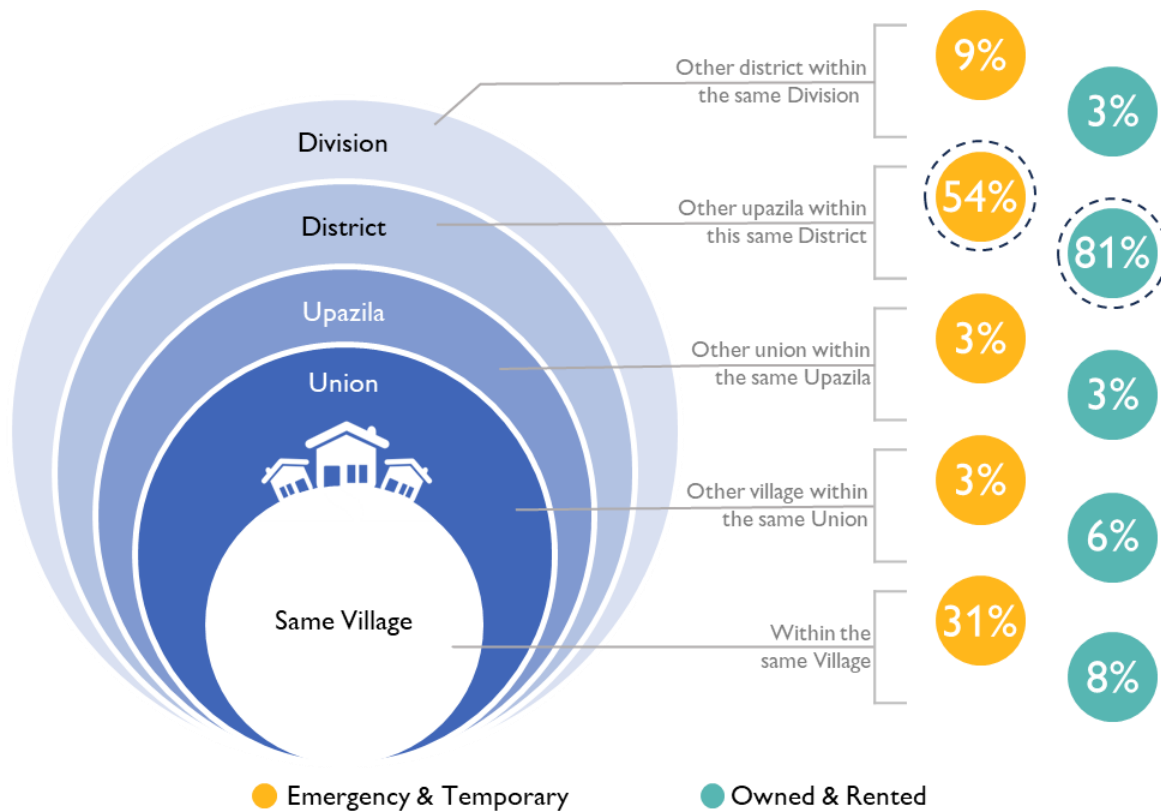

### CAUSES OF DISPLACEMENT

#### MAJOR DISASTER EVENT(S) LEADING TO THE DISPLACEMENT

#### DESTINATION

Majority of the displaced households were displaced within the same district but from another upazila (81% households with emergency and temporary shelter and 54% households with owned and rented shelter).

## TOP 5 CAUSES OF DISPLACEMENT AT PLACE OF ORIGIN

Owned & Rented	Causes of Displacement	Emergency & Temporary
39%	Destroyed shelter due to disaster/specific climatic events	38%
26%	Loss of livelihood: equipment, livestock, fishing boat, net	22%
20%	Destroyed agricultural land	14%
10%	Poverty and landlessness	23%
2%	Unsanitary conditions, polluted drinking water	2%

## OVERALL NEEDS AND CHALLENGES

### KEY CHALLENGES FACED SINCE DISPLACEMENT

The following are the top six key challenges faced by households displaced due to disaster after displacement.

## KEY NEEDS

When asked to specify their needs further, the disaster displaced households mentioned the following.

## NEEDS RANKING

Disaster displaced households were asked to rate their top needs according to priority. Their answers are summarized below, on a scale of One to Five, with Five being the highest need. Those in emergency and temporary shelters showed a greater need for shelter, water, and sanitation.

Owned & Rented	Emergency & Temporary
Water	Sanitation
Sanitation	Shelter Support
Food	Water
Shelter Support	Health
Health	Food
NFI (Non-Food Items)	NFI (Non-Food Items)
Protection (for an example support for elderly people, pregnant & lactating mother etc.)	Protection (for an example support for elderly people, pregnant & lactating mother etc.)

### Legend

<=2.0	2.1-2.5	2.6-3.0	3.1-3.5	>3.5
-------	---------	---------	---------	------

## LIVELIHOOD

Overall, 74 per cent of households with owned and rented shelter and 69 per cent households with emergency and temporary shelter responded that there has been a major change in livelihood opportunities following displacement, with opportunities being negatively impacted primarily due to the loss of productive assets.

### AVERAGE INCOME AND EXPENDITURE

	Owned & Rented		Emergency & Temporary	
	Previous	Current	Previous	Current
Average Income (BDT/month)	10,714	9,543	11,472	7,111
Average Expenditure (BDT/month)	7,229	8,429	5,833	6,944

Average income and expenditure are stated as Bangladeshi Taka per month.

### MAJOR EMPLOYMENT SECTORS OF DISPLACED HOUSEHOLDS

The following table shows the professions that the main earning members are currently engaged in.

## NEED FOR CAPACITY BUILDING

Sixty per cent of displaced households living in owned and rented shelters and seventy-eight per cent of households living in emergency and temporary households responded that they are in need of capacity building in order to improve their livelihood conditions.

## ASSETS LOST DUE TO DISPLACEMENT

## ACCESS TO ELECTRICITY

Three per cent households in owned and rented shelters and eight per cent living in emergency and temporary shelters do not have access to electricity.

#### MAIN CONSTRUCTION MATERIAL OF ROOF AND WALLS

Walls of emergency and temporary shelters are mostly (42%) made of wood, followed by corrugated iron (CI) sheets (33%). Most owned and rented homes had walls made of wood shingles (49%) and brick/concrete (23%). CI sheets were the most commonly used material for roofing both for owned and rented shelter households (77%), and emergency and temporary shelter households (78%). It was notable that more households in owned and rented shelters used thatching (20%) for their roofing material compared to those in emergency and temporary households (8%).

## WASH

### MAIN SOURCES OF DRINKING WATER

### WATER PURIFICATION

It was notable that on average 81 per cent households do not purify their drinking water before drinking with the reasons for not purifying drinking water varied. Of those living in owned and rented shelters, 81 per cent responded that the water is clean enough and 19 per cent responded that they cannot afford to purify. Of those living in emergency and temporary shelters, 82 per cent responded that the water is clean enough and 15 per cent responded that they cannot afford to purify.

47 per cent of disaster displaced households living in emergency and temporary shelters said that they had to pay an average of BDT 359 for drinking water monthly. On the other hand, 29 per cent owned and rented shelter households pay an average of BDT 520 monthly for drinking water.

## SOURCES OF WATER USED FOR OTHER PURPOSES (BATHING, WASHING CLOTHES, ETC.)

## ACCESS TO BATHING FACILITIES AND LATRINES

## BATHING FACILITY TYPES

It was found that those who had access to shared bathing areas mostly used tube wells (owned and rented, 55%; emergency and temporary 53%), and ponds (owned and rented, 45%; emergency and temporary 44%).

## LATRINE TYPES

## PROTECTION AND SECURITY

### SENSE OF SECURITY FOR WOMEN AND CHILDREN

Fifty-three per cent of emergency and temporary shelter households perceive the safety for women and children to be partially safe to safe, with forty-two per cent considering the area to be unsafe. Comparatively, it was found that those who are in owned or rented shelters consider the sense of security to be marginally better.

It was found that none of the latrines and bathing facilities used by HHs in emergency and temporary shelters were segregated for men and women. No bathing facilities or latrines had doors with locks in emergency and temporary shelters, and 7 per cent of households living in owned or rented shelters had doors with locks to provide privacy in their bathing areas. Bathing areas were seldom attached to households and were often located away from the compounds. The perception of safety while using the bathing facilities was mostly unsafe, especially among those living in emergency and temporary shelters.

Displaced households on average reported feeling a low sense of security when bathing or when using the latrine facilities. It was noted that those in emergency and temporary houses considered WASH facilities to be more unsafe.

## CHALLENGES IN TERMS OF SAFETY AND SECURITY

Regarding safety and overall security concerns, the following was related by the disaster displaced households.

## ACCESS TO SERVICES AND SUPPORT

### SOURCES OF SUPPORT RECEIVED

Around half of the total displaced households (n=71) reported not receiving support either in cash or in kind after becoming displaced. Among those that received support, 55% reported that they received support from the government and 45% from NGOs.

## TOP 5 TYPES OF SUPPORT RECEIVED

Households that received support reported the following:

On average, those that received cash reported receiving on average around BDT **22,000** (owned and rented) and BDT **4,000** (emergency and temporary) after becoming displaced.

## SAFETY NET PROGRAMMES

Forty per cent households in owned and rented shelters and thirty-three per cent households in emergency and temporary shelters said that they are part of safety net programmes in their current location.

Among them, it was reported by eight per cent of those living in emergency and temporary shelters that they had lost access to social safety net programmes after becoming displaced- with Vulnerable Group Feeding (VGF) being the most common programme that were not accessible.

## **INTENTIONS TO RETURN**

It was found that the majority of disaster displaced households wish to stay at the same location, even those in emergency and temporary housing. The main reasons for this were that there are no assets (51%), no family or connections (42%) and no employment opportunities (17%) left in the place of origin.

## **CONCLUSION**

Although it was assumed displaced population who are currently living in a house/land that they own or have the ability to pay their rent will not be in need of interventions, the study revealed that they believe they have not reached durable solutions and as such, they require humanitarian and developmental assistance. It was found that the effects of displacement are long-lasting and targeted interventions are required in order to support them achieve durable solutions, in particular with WASH, shelter and livelihood.
