Distribution of Site Types Covered

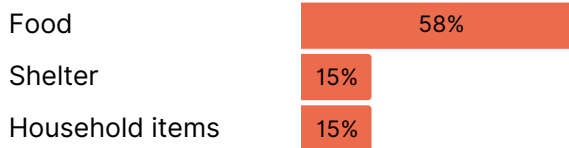

SITE LEVEL POPULATION MOVEMENTS

- In the majority of sites (**94%**) focal points reported people were **arriving to the site**. On average, focal points reported **150 individuals** (40 households) arrived to the site in the past 7 days.
- In **3%** of the sites, focal points reported people were **leaving**. On average, **200 individuals** (40 households) left the site in the past 7 days.
- In **3%** of the sites, focal points reported **no population changes** in the past 7 days.

KEY PRIORITY NEEDS

Top 3 Most Reported First-Priority Needs

METHODOLOGY:

Site Focal Points provide real-time updates through the online Zite Manager form whenever a site experiences a shift of 10 or more households, or when population needs change. These submissions are then reviewed and analyzed by the Information Management team of the Site Management Cluster (SMC). This snapshot reflects only the sites reached by the SMC; some areas may be under-reported due to connectivity challenges, ongoing displacement, or the absence of identified site focal points.
