## Population Movement Monitoring Flash Update

■ 15-18 October 2025

Since 10 Oct

487,988

## OVERVIEW OF DISPLACEMENT MOVEMENTS

- Following the announcement of the ceasefire, population movements were recorded across several areas, including movements from West to East within Khan Younis and from the southern part of Gaza towards northern areas. Between 15-18 October, a total of 95,639 displacement movements were recorded.
- Since 10 October, approximately 402,488 displacement movements have been observed crossing from south to north, primarily through Al-Rasheed Road, with additional movements noted along Salah Al-Deen Road.
- In addition, since 10 October, a total of 70,960 displacement movements were recorded from the western parts of Khan Younis towards the eastern areas of the governorate.

## **METHODOLOGY**

- The figures on crossings from south to north were collected through imagery analysis as well as two Flow Monitoring Points (FMPs) located in Deir Al Balah, while movements from west to east were recorded through one FMP in Khan Younis. These figures only reflect the displacement movements observed at these specific points. It is therefore possible that some people may have split from their groups or changed routes before reaching the monitored FMPs, meaning certain movements may not have been captured.
- The FMPs operate daily from 8:00 AM to 5:00 PM. Therefore, movements occurring beyond this timeframe are not captured, which represents a limitation in monitoring the overall flow of displacement.
- The data presented in this report reflects displacement movements received up to 5:00 PM on 18 October 2025 (Gaza time). Recorded movements received after this time will be included in the next report.
- The numbers refer to displacement movements, and not individuals.
  People are displaced multiple times, therefore what is reported is flow figures rather than stock figures. Access constraints continue to pose significant challenges, impacting data quality.
