OVERVIEW OF DISPLACEMENT MOVEMENTS

- Following the announcement of the ceasefire, population movements were recorded across several areas, including movements from West to East within Khan Younis and from the southern part of Gaza towards northern areas. Between 30 November and 6 December, a total of **14,411** displacement movements were recorded, **120** of these movements were reverse movements from north to south. Meanwhile, Site Management Cluster partners reported that approximately **200** individuals were displaced from east Gaza to west Gaza.
- Since 10 October, approximately **653,532** displacement movements have been observed crossing from south to north, primarily along Al-Rasheed Road, with additional movements noted on Salah Al-Deen Road. Winter conditions and recurrent flooding—coupled with the continued search for humanitarian assistance—remain key drivers of the continuous population movements.
- Given the extensive level of destruction, families who have returned to areas near their homes are increasingly worried as winter sets in. Flooding further exacerbates the vulnerabilities of displaced populations. With the onset of the winter season, households continue to face significant challenges in securing adequate shelter and reliable heating sources.

METHODOLOGY

- The figures on crossings from south to north were collected through imagery analysis as well as two Flow Monitoring Points (FMPs) located in Deir Al Balah. These figures only reflect the displacement movements observed at these specific points. It is therefore possible that some people may have split from their groups or changed routes before reaching the monitored FMPs, meaning certain movements may not have been captured.
- The FMPs operate daily from 8:00 AM to 5:00 PM. Therefore, movements occurring beyond this timeframe are not captured, which represents a limitation in monitoring the overall flow of displacement.
- The data presented in this report reflects displacement movements received up to **5:00 PM on 6 December 2025** (Gaza time). Recorded movements received after this time will be included in the next report.
- The numbers refer to displacement movements, and not individuals. People are displaced multiple times, therefore what is reported is flow figures rather than stock figures. Access constraints continue to pose significant challenges, impacting data quality.

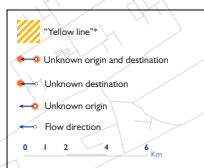

-All maps presented under this update are for illustration purposes only. The depiction and use of boundaries, geographic names, and related data shown on maps and included in this report are not warranted to be free of error nor do they imply judgment on the legal status of any territory, or any endorsement or acceptance of such boundaries by Site Management Cluster.

-The illustrated movements on the map do not necessarily reflect the routes people used during their displacement, they are indicative to show direction of movement.

-Figures on the map reflect data received within the reporting period.
